

ATM for income management
Complete system for cash management
Designed for Mass Distribution and Transport

MoneyGuard ATM is a system that allows the user to verify the cash incomes, safeguard the banknotes, coins, checks and tickets (optional) and to speed up the crediting process on the bank accounts without using the traditional continuous cashbox with all its implications.

At any time, the collection process can be monitored every time with a normal internet connection by authorized personnel with the login and password Access. All transactions are recorded and the notes are verified when inserted via a BCE certified currency validator.

Once the customer defined cash "target" is reached, the security carrier Company is automatically notified and arrange the safe with drawal of the cash containers and the emission of the realed receipt.

The processing and reconciling of the transported values and the consequent money transfer to the bank is carried out by the security carrier relieving the costumer form all these operations that require an important amount of time and risk during transportation.

Other areas of application: Retail, Transport, self-ticketing, self-payment, etc.
