MoneyGuard
X series

Retail

VERIFY, ACCOUNT, PROTECT, REDUCE COSTS

Secure management of cash

Designed for the Retail market

MoneyGuard X series is a system that allows the user to verify the cash incomes, safeguard the banknotes, coins, checks and tickets, and to speed up the crediting process on the bank accounts without using the traditional continuous cashbox with all its implications. This translates in obvious benefits as: time saving and safety.

At any time, the collection process can be monitored at any time via internet by authorized personnel with the login and password access. All transactions are recorded both in the machine and on the server.

The MoneyGuard is BCE certified in the TAM category (teller assistant machine): it verifies and evaluates banknotes discriminating suspicious notes without interrupting the operations.

The unauthorized access or the potential attempt of removal or break-in, activates the marking rendering the notes unusable. This system enables us to reduce insurance costs and is a deterrent for wrongdoers.

Once the cash "target" is reached, the management software immediately notifies the security carrier company arranging the safe withdrawal of the cash containers and printing the related receipt.

The stacking of banknotes in a drawer in classified piles allows the customer a fast and easy daily accounting or simplifies the cash processing by the security carrier.
