

**THE FIRST CASH-IN FLAT FOR TABLE GAMING**  
Complete safety management system of the money  
*CASINO equipment*

Money Guard EASYDROP is a patented system that allows the user to verify the cash incomes, to secure the banknotes and to speed up the accounting process, as a matter of fact notes are classified and piled.

As a new feature **TiTo** are supported. You connect a **TiTo** printer and it can handle the ticket-in and the ticket-out exchanges.

Inside MoneyGuard there is a drawer for cash. Each drawer has a unique code enabling precise traceability until the counting room.

The process can be monitored at any time via internet by authorized personnel with the login and password access. All transactions are recorded and the notes are verified when inserted via a BCE certified currency validator.

Once the cash “target” set by the customer is reached for any given gaming table, the person in charge of collection is notified automatically and he can empty the till and replace the drawer in a few minutes.
