Cash in transit

CASH SECURITY MANAGEMENT SYSTEM

Pavement Risk Cancelled, Maximum Security during Transport

Designed for CIT

CollectorDrop is a device allowing for a secure collection of files and/or envelopes using a drawer equipped with a marking system. This system has been used successfully for years for secure management of **“Pavement Risk”**.

The CollectorDrop allows for completely secure transport even with the possibility of using light means and, therefore, without specific armoring and leading to personnel savings.

The collectorDrop maintains the cash protected inside the vehicle by means of a strong box and a marking system.

The collectorDrop holds a maximum of 20,000 banknotes, it being possible to request a collectorDrop adapted to the fleet requirements for other capacities.

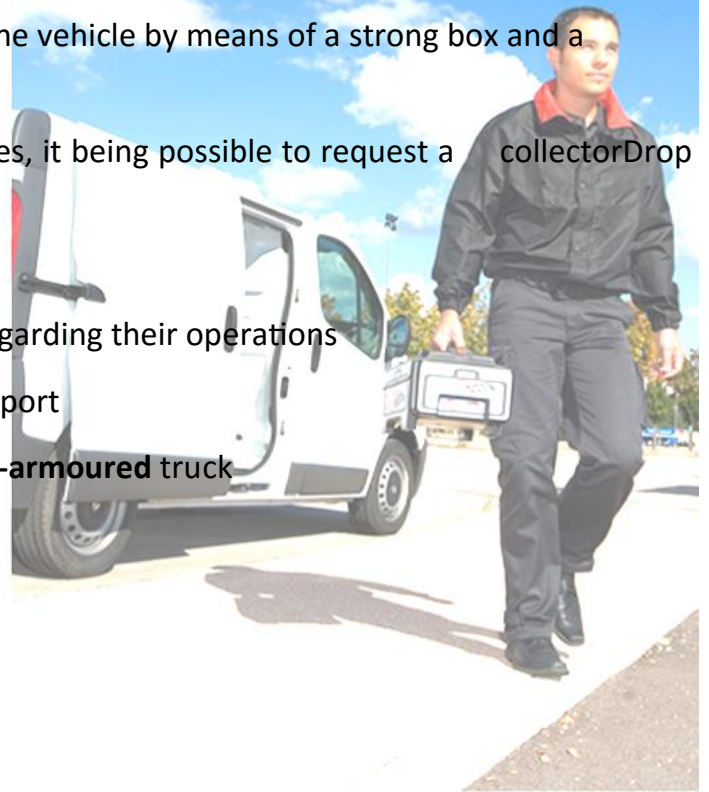

The reasons to choose **CollectorDrop**:

Simple: easy to use, always guiding the operators regarding their operations

Economic: as it uses a single drawer for secure transport

It leads to savings: allows for the transport in a **non-armoured truck**

It increases security: Certified HDS marking system
