Description

Money Guard FASTDROP is a system that allows the user to verify cash takings, ensuring the correctness of bills and speeding up the counting process, with all bills being classified and stacked.

Very QUICK (3 bills/second), very COMPACT and FLAT, just 4.88 x 5.51.

With a new feature: TiTo integration. It connects to a TiTo printer that can handle the deposit and dispensation transactions.

MoneyGuard includes a cash drawer. Each drawer has a unique code that allows for precise traceability up to the counting room.

The process can be monitored online at all times by authorised personnel with corresponding usernames and passwords. All transactions are recorded and the bills are verified when inserted, using an ECB-certified currency validation device.

Once the "target" set by the client for a gaming table has been reached, the person in charge of collections is notified automatically, and they can empty the cash box and replace the drawer within minutes.
